PROFESSIONAL SUMMARY

Full-stack product engineer with 2+ years building fintech, e-commerce and government software. Led the proof of concept that won a Department of Education (Philippines) contract, delivered a multivendor marketplace single-handedly from design to production, and built an internal payroll system that cut payroll release from one week to 30 minutes. Experienced across React / Next.js, Node.js, PostgreSQL, GCP / AWS, Docker and CI/CD, with hands-on work in RAG and LLM-powered features, and deep hands-on expertise in Wrike consulting, Wrike API and Wrike Sync integration.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Java, SQL, HTML, CSS
Front End	React, Next.js, Angular, React Native
Back End	Node.js, Medusa JS, Spring Boot, REST API design
Databases & Search	PostgreSQL, MySQL, Algolia
Cloud & DevOps	Google Cloud Platform, AWS (S3, SES), Docker, CI/CD, monorepos, Medusa Cloud, Vercel, Railway, Hetzner, cPanel
AI / LLM	Retrieval-augmented generation (RAG), document chunking, LLM API integration, agentic chat
APIs & Integrations	Wrike API, Wrike Sync, QuickBooks Online API, Tableau REST / Embedding API, Amazon SES, Algolia; payment gateways GiyaPay, bKash, PayPlus
CMS	WordPress, Elementor, Webflow, Liferay
Tools	Git, GitHub, Postman, Wrike, Agile / Scrum; AI-assisted development with Claude, Cursor, Kilo Code, Replit
Hardware (basic)	ROS, Arduino, NVIDIA Jetson Nano, Raspberry Pi

PROFESSIONAL EXPERIENCE

Product Engineer (promoted from Junior Software Engineer) — **May 2024 – Present**

BIMS Technologies Inc. — *Philippines (Remote)*

- Served as point person on the DepEd school-facilities analytics POC within my first months; the POC secured the government contract for BIMS.
- Designed, built and deployed Maretinda, a multivendor marketplace for women sellers, as the sole engineer — from UI design through test and production environments.
- Built TimeFlow, an internal payroll system on the Wrike API, reducing payroll release for the whole team from about one week to 30 minutes.
- Developed a QR payment system on the GiyaPay API, one of the Philippines' leading payment gateways, with real-time confirmation and reconciliation.
- Wrike consultant for internal and client teams: designed spaces, folder and project structures, blueprints, custom item types, request forms, automation rules, dashboards and reports.
- Built Wrike integrations using the Wrike REST API, webhooks and Wrike Sync to keep tasks, time logs and status in sync with in-house and third-party systems; prototyped a QuickBooks Online API integration for accounting data.

Software Engineer Intern — **Feb 2024**

Astria Corporation Philippines — *Philippines (Remote)*

- Designed and built the React.js front end for Astria Ingest, a new digital-forensics service built on FTK Enterprise, and integrated it with the product's APIs.

EDUCATION

BSc (Hons) Top-up — Distance Learning — **In progress**

University of Roehampton, London, UK

Higher Diploma in Software Engineering — **2022 – 2024**

EduClaaS / Lithan Academy, Singapore

KEY PROJECTS

Maretinda — Multivendor E-commerce Marketplace — BIMS Technologies

Medusa JS, Next.js, PostgreSQL, Docker, CI/CD, GCP, Medusa Cloud, AWS S3 & SES, Algolia, GiyaPay, LLM API, React Native

- **Problem:** women entrepreneurs needed an accessible online marketplace, and the project had no dedicated engineering team.
- Delivered end to end as sole engineer: Medusa JS backend and Next.js storefront in a monorepo, containerized with Docker and shipped via CI/CD to GCP and Medusa Cloud.
- Integrated AWS S3 for media, Amazon SES for transactional email, Algolia for product search and GiyaPay for checkout.
- Built an agentic in-app chat assistant using RAG — content chunked and indexed, answered through an LLM API. React Native mobile app in development.

DepEd Philippines — School Facilities Analytics (POC) — BIMS Technologies

React, Node.js, Tableau API, Wrike API

- **Problem:** the Department of Education had no clear view of each school's facilities — benches, boards and other resources — across a province.
- Led the POC as point person: Tableau dashboards embedded via the Tableau API, Wrike API for field data collection, React front end and Node.js services.
- **Result:** POC accepted and the government contract awarded to BIMS.

TimeFlow — Payroll Management System — BIMS Technologies

React, Node.js, SQL, Wrike API, GCP

- **Problem:** releasing payroll took about a week of manual time-sheet collation.
- Pulled time logs and approvals from Wrike through advanced API usage into a SQL-backed React / Node.js app; deployed and maintained on GCP.
- **Result:** whole-team payroll now released in 30 minutes.

GiyaPay QR Payments — BIMS Technologies

GiyaPay API, Node.js, React

- Built scan-to-pay QR acceptance with real-time confirmation and reconciliation, plus redirect-free checkout embedded on merchant websites.

LEADERSHIP & VOLUNTEERING

- **Chief Technology Officer (Volunteer), Dreams of Bangladesh**, Jan 2026 – Present — lead technology direction part-time alongside my full-time role; website lead for DoB Hydrojan; building Orbis Square, a robotics-parts e-commerce platform with PayPlus.
- **Associate Executive Director, WICE Bangladesh** — built the event platform with bKash and PayPlus payment integration for registrations.
- **Judge** — International round, WICE (Malaysia); National round, Innovation World Cup (Bangladesh). **Participant** — RoboSub.
